Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments that Lekeux in view of Tamura does not teach the seal to be perpendicular to the direction of insertion are found non-persuasive. Tamura teaches a device having sealing in the radial direction. Regarding the limitation that Lekeux and Tamura do not teach the walls to be approximately rectangular and to form a common opening with radial and axial opening directions are found non persuasive. Tamura does teach that the walls are approximately rectangular in Fig 8 (and also figs 9A & B). Besides, Lekeux also teaches walls having rectangular shape (Fig 1,5). Regarding the argument that Lekeux does not teach the two outer walls to be connected to one another by means of an L-shaped frame element is found non persuasive. Tamura (Figs 8-9) teaches that a module can be shaped differently and have outer walls arranged at an angle to one another and can close openings and that they are connected to each other by and L-shaped frame element. Tamura also teaches that the device has sealing capabilities in both the radial and axial direction (Figs 8-9). Examiner notes that both references cited by examiner teaches the concept and the claimed invention and that both references should be considered in combination. It is also well known in the art to modify / change a shape of a module to suit the packaging needs in the invornment it was designed to be utilized in.
